HOW TO STAIN FIBERGLASS ENTRY SYSTEMS

1. HOW TO START
Doors can be stained either hanging in the opening or removed from the frame (recommended). Should you remove the door, take care to protect it from damage. Sidelites will need to be finished vertically. To remove the door from the frame, use a center punch and hammer. Strike the hinge pin from the bottom until it pops up (for outswing units – hinge leaf must be removed from the door). Drive the hinge pin as far as possible with the punch. Using a pair of pliers, grasp the hinge pin and, while twisting, pull the pin out. Remove all door hardware.

2. MATERIAL REQUIRED
Find a well-ventilated location that is dust-free, well ventilated and within the climate conditions recommended by the stain/top-coat manufacturer.

Coatings and accessories:
- Mineral spirits
- Last-free rags or cheese cloth (recommended)
- 2" wide foam brush
- Safety razor blades
- One pair of rubber gloves
- Stir sticks
- Masking tape
- Stain
  - High-quality, opaque (non-transparent), heavily pigmented, oil-based stain (recommended)
  - Gel stains can also be used
  - Semi-transparent stains are not recommended
  - High-quality, exterior grade, UV stabilized polyurethane sealant (satin or low gloss)
- 2-1/2" – wide china bristle brush

Tools:
- Hammer
- Center punch
- Safety glasses
- Phillips screwdriver
- Pliers

3. PREPARING THE DOOR SURFACE
IMPORTANT: Dust, debris and other surface contaminants can accumulate on the surface of the door. Therefore, to achieve best results and maximum coating adhesion, wipe/clean all surfaces of the door panel(s) and sidelite(s) thoroughly with mineral spirits. Allow the surface to dry completely – until there is no residual odor. Mask (tape) off all surfaces that will not be stained.

4. STAINING THE DOOR
Use a high quality, heavily pigmented, oil-based stain (recommended). Gel stains can also be used. Before starting, and occasionally throughout the project, stir the stain until the texture is creamy. We recommend that before starting, you try staining a small inconspicuous area of the door to achieve the desired color. One coat of stain is required with the recommended (per manufacturer’s instructions) dry time needed between sides. The stain should be applied in the following order working on one small section of the door at a time.

Finishing Order:
1. Panels and sticking (moulding profiles)
2. Vertical center areas (mullions)
3. Horizontal areas (rails)
4. Outside vertical areas (stiles)
5. Edge of door (includes both sides, the top of the door, and potentially the bottom)

Staining:
1. Put on gloves and prepare your materials.
2. Stir stain thoroughly using smooth strokes, avoid creating bubbles and do not shake the stain container.

3. Working in the specified order and individual section, dip the foam brush into the stain then use the rim of the container to release any excess. Use the foam brush to apply the stain onto the section. Using a cloth, rub the stain into the embossed wood-grain ensuring complete and even coverage. Stop between sections to tidy up the perimeter with a rag and mineral spirits. Clean edges will help define the individual components of the door.

4. Once the door has been completely stained, check for any drips. While the stain is still wet, lightly brush the entire surface of the door with a china bristle brush. Use long strokes and work in the direction of the grain to even out color and achieve consistency.

5. Let the first stained surface dry, per the stain manufacturer’s recommended drying time, before proceeding to the second side.

6. If you prefer a darker appearance, repeat staining steps one through five only after first coat is completely dry. Do not sand between staining coats.

5. SEALING OR APPLYING THE TOP-COAT
The top-coat or sealant for your door is very important and required for weatherability. It protects the stained door from the elements and makes the door surface washable. Be sure that the stain coating is completely dry and then apply a high-quality, UV stabilized, clear exterior polyurethane coating (satin or low gloss) – used for any normal exterior wood application.

1. Stir top coat thoroughly using smooth strokes, avoid creating bubbles and do not shake the top coat container.
2. Do not overload the brush. Dip the end of the brush into the coating and gently slide the flat side of the brush against the edge of the container to remove the excess.
3. Apply with even gentle strokes. Press hard enough to flex the bristles a small amount and then pull the brush gently along the door’s surface.
4. As you apply the sealant, pull the brush quickly along the area two or three times lightly to even out the brush strokes.
5. Allow the first coat to dry completely (follow manufacturer’s recommendations) and apply at least one more coat using the same steps as above. A minimum of two coats is required for complete protection and the door should be ressealed annually to ensure lasting protection of the finish.

6. After both sides of the door have been top-coated (twice) and are completely dry, remove the paper and tape from the glass and protected surfaces.

7. Clean the glass with window cleaner and remove any finishing materials from the glass with a safety razor.

8. Replace door back into frame.

NOTE: To maintain product warranty, we require that all six sides (front and back plus all four edges) be sealed to eliminate moisture. Stain or paint the door, frame, header, and brickmould within 45 days of installation. Repainting or re-staining every 1 to 7 years will be required, depending upon weather exposure.

WARNING: Doors stained or painted with dark colors or doors with attached, non-vented storm doors, may become very hot to the touch in direct sunlight and void the warranty.
